

KNOBS and Federperiti revolutionize classic car appraisals with CertiShield: blockchain to ensure authenticity and security

Milan, October 11, 2024 — On the occasion of Auto e Moto d'Epoca 2024, Italy's largest exhibition dedicated to classic vehicles, KNOBS and Federperiti announce an innovative partnership that promises to revolutionize the world of classic car appraisals. Thanks to the integration of KNOBS' CertiShield service into Federperiti's E.V.E. (Esperti Veicoli d'Epoca) project, appraisals can now be certified on the blockchain, ensuring authenticity, immutability, and a verifiable date stamp.

A new standard of trust and security

The collaboration between KNOBS, a leading Italian company in blockchain solutions, and Federperiti, the reference association for insurance and damage assessors, as well as experts in Italian vintage vehicles (E.V.E.), was born out of the need to offer greater transparency and security in the classic car sector. Appraisals, including text, documents, photos, audio, and video, will be notarized on the blockchain by creating a digital certificate (an NFT), making any subsequent alteration impossible.

Official Statements

"We are excited to collaborate with Federperiti to bring CertiShield into the classic car world," said Vincenzo Rana, CEO of KNOBS. "Blockchain offers unprecedented security and transparency, crucial elements in a market where authenticity and historical value are fundamental."

"The integration of CertiShield into our E.V.E. service represents a significant step toward digital innovation," added Filippo Zaffarana, President of Federperiti. "Our clients will benefit from appraisals that are certified and legally recognized throughout the EU, thereby increasing the trust and value of their classic vehicles."

Benefits for owners and collectors

- **Guaranteed authenticity:** Blockchain certification ensures that the appraisal is original and unaltered.
- **Legal value:** The timestamp on certified appraisals supports their legal validity.
- **Transferability:** In case of a sale, the certified appraisal can be transferred to the new owner, preserving the vehicle's documented history.
- **Privacy:** Recorded data is anonymized and accessible only to the owner, ensuring maximum confidentiality.

How it works

1. **Appraisal execution:** A Federperiti expert conducts a detailed appraisal of the classic vehicle.
2. **Certification with CertiShield:** The appraisal is certified on the blockchain via CertiShield, generating an NFT (Non-Fungible Token) that attests to the document's immutability.
3. **Secure access:** The owner receives the certificate in their digital wallet and can access it anytime via a code.

A digital future for classic cars

This initiative aims to protect the value of classic vehicles by facilitating future transactions, making the process more transparent and reliable for both sellers and buyers.

About KNOBS

KNOBS is a leading Italian tech advisory firm specializing in advanced technology solutions, with a particular focus on blockchain, digital security, and Web3 innovation. It is part of the SG Company Group, a Società Benefit Spa listed on Euronext Growth. With extensive experience in digital certification and blockchain-based notarization, KNOBS offers services like CertiShield, a solution designed to guarantee the authenticity, immutability, and legal validity of documents and appraisals across various sectors, from mobility to the creative industries.

About Federperiti Expert

Federperiti Expert is the national federation of provincial, interprovincial, and regional associations of Italian insurance assessors and experts in classic and collectible vehicles. It is committed to promoting professionalism and innovation in the field of appraisals and technical evaluations.
